Hero → States the claim directly: *"I build things that ship, not just notebooks."* Subhead clarifies what that means for a client — custom AI tools that go from messy data to something running in production, not a proof-of-concept that dies in a Jupyter file. One clear CTA button: *Email me about your project.*

Earns its place: this is the claim, stated once, unmissable.

Work / Case Studies → 2–4 real projects, each framed as: the messy problem → what you built → what shipped/result. This is the only page doing the actual proving — it's where "I build things that ship" gets evidence instead of just being asserted.

Earns its place: without this, the claim is just a slogan.

About → Short. Who you are (BS AI student, FlyRank AI intern), why that background means you can execute, not just theorize. 3–4 sentences, not a resume.

Earns its place: clients hiring for a project want to know they can trust the person, briefly — not read a CV.

Contact → Just your email, restated CTA, maybe one line reducing friction ("Tell me what you're trying to build — I'll tell you if it's a fit"). No form with 10 fields.

Earns its place: it's the one action, made frictionless.

Deliberately left out: a Services/Pricing page, a blog, testimonials-as-separate-page. These either belong folded into Work (results speak louder than a services list) or they're pages "just because" — the brief specifically warns against this.

CLAUDE PROJECT SETUP:

PRESSURE TEST PROMPT:

☀ Happy Tuesday, Rida

Here's my sitemap: Hero → Work/Case Studies → About → Contact.
Hero states my claim. Work/Case Studies proves it with real projects.
About is short, just credibility. Contact is the one action: email me
about your project.
Pressure-test this against my one person (clients who need a custom AI
tool built) and my one action (get them to email me). Where does this
map fail them? What would make someone NOT take the action? Is any page
doing double duty or missing something the claim needs to hold up?
